Publication Information: *Spectrochimica Acta, Part B*. For 1997 volume 52 is scheduled for publication. Subscription prices are available on request from the Publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where Air delivery via SAL mail is ensured: Argentina, Australia, Brazil, Canada, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, PR China, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available on request. Claims for missing issues must be made within six months of our publication (mailing) date.

Orders, claims and product enquiries: please contact the Customer Support Department at the Regional Sales Office nearest you:
New York: Elsevier Science, P.O. Box 945, New York, NY 10159-0945, USA; Tel. (+1)212-633-3730, [Toll free number for North American customers: 1-888-4ES-INFO (437-4636)], Fax (+1)212-633-3680, E-mail usinfo-f@elsevier.com.
Amsterdam: Elsevier Science, P.O. Box 211, 1000 AE Amsterdam, The Netherlands; Tel. (+31)20-4853757, Fax (+31)20-4853432, E-mail nlinfo-f@elsevier.nl.
Tokyo: Elsevier Science, 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106, Japan; Tel. (+81)3-5561-5033, Fax (+81)3-5561-5047, E-mail kyf04035@niftyserve.or.jp.
Singapore: Elsevier Science, No 1 Temasek Avenue, #17-01 Millenia Tower, Singapore 039192; Tel. (+65)434-3727, Fax (+65)337-2230, E-mail asianfo@elsevier.com.sg.

Enquiries concerning manuscripts and proofs: questions arising after acceptance of the manuscript, especially those relating to proofs, should be directed to Elsevier Science Editorial Services, Mayfield House, 256 Banbury Road, Oxford, OX2 7DH, UK; Tel. (+44) (0) 1865 314900, Fax (+44) (0) 1865 314990.

Advertising information: Advertising orders and enquiries may be sent to: **International:** Elsevier Science, Advertising Department, The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, UK, Tel (+44)(0)1865 843565, Fax (+44)(0)1865 843976. **USA and Canada:** Tino DeCarlo, Advertising Sales Director, Elsevier Science Inc., 655 Avenue of the Americas, New York, NY 10010-5107, USA, Tel.: (212) 633 3815; Fax: (212) 633 3820; e-mail: t.decarlo@elsevier.com. **Japan:** Elsevier Science Japan, Marketing Services, 1-9-15 Higashi-Azabu, Minato-ku, Tokyo 106, Japan, Tel. (+81)-3-5561-5033, Fax (+81)-3-5561-5047.

US mailing notice — *Spectrochimica Acta, Part B*, (ISSN 0584-8547) is published monthly (with two additional issues) by Elsevier Science, (Molenwerf 1, Postbus 211, 1000 AE Amsterdam). Annual subscription price in the USA is US $2191.00 (valid in North, Central and South America), including air speed delivery. Application to mail at second class postage rate is pending at Jamaica, NY 11431.

USA POSTMASTER: Send address changes to Spectrochimica Acta, Part B, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. **AIRFREIGHT AND MAILING** in the USA by Publication Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003.

Review

Boris V. L'vov 1 Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes

Regular Papers

A.E. Pichahchy, D.A. Cremers and M.J. Ferris 25 Elemental analysis of metals under water using laser-induced breakdown spectroscopy

P.V. Maravelaki, V. Zafiropulos, V. Kilikoglou, M. Kalaitzaki and C. Fotakis 41 Laser-induced breakdown spectroscopy as a diagnostic technique for the laser cleaning of marble

Suh-Jen Jane Tsai, Li-Lin Chang and Shiow-Ing Chang 55 Silver and lanthanum as effective modifiers in trace determination of cadmium in nickel–base alloys by electrothermal atomic absorption spectrometry

F. Bosch Reig, V. Peris Martinez, J.V. Gimeno Adelantado, F. Bosch Mossi, D.J. Yusá Marco and M.T. Doménech Carbó 67 Quantitative electron probe microanalysis of metallic oxide mixtures applying an empirical calibration technique

D. Conrad Grégoire and Maria de Lourdes Ballinas 75 Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry

Norman N. Sesi, David S. Hanselman, Paul Galley, Julie Horer, Mao Huang and Gary M. Hieftje 83 An imaging-based instrument for fundamental plasma studies

A. Lopez Molinero, J.R. Castillo, P. Chamorro and J.M. Muniozguren 103 Multivariate statistical characterization of the tolerance of argon inductively coupled plasmas to organic solvents

F. Lanza, A. Ceccarini and P. Papoff 113 Preconcentration of analytes by aerosol deposition in Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level

Research Note
T.C. Johnston, R.S. Perry, L.J. Fick and H.B. Fannin 125 An examination of relative trends of atomic detection limits in the inductively coupled plasma

No. 2

Announcement iii

Review
Q. Jin, Y. Duan and J.A. Olivares 131 Development and investigation of microwave plasma techniques in analytical atomic spectrometry

Regular Papers
I.D. Brindle and E. Ługowska 163 Investigations into mild conditions for reduction of Se(VI) to Se(IV) and for hydride generation in determination of selenium by direct current plasma atomic emission spectrometry

C.R. Quétel, B. Thomas, O.F.X. Donard and F.E. Grousset 177 Factorial optimization of data acquisition factors for lead isotope ratio determination by inductively coupled plasma mass spectrometry

C.M. Andrle, N. Jakubowski and J.A.C. Broekaert 189 Speciation of chromium using reversed phase-high performance liquid chromatography coupled to different spectrometric detection methods

M. Ertuğrul 201 Measurement of L/Lα intensity ratios for elements in the region $57 \leq Z \leq 92$ by a Si(Li) detector

A. Bogaerts, E. Wagner, B. W. Smith, J.D.Winefordner, D. Pollman, W.W. Harrison and R. Gijbels 205 Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations

A. Bogaerts, R.D. Guenard, B.W. Smith, J.D. Winefordner, W.W. Harrison and R. Gijbels 219 Three-dimensional density profiles of argon metastable atoms in direct current glow discharge: experimental study and comparison with calculations

Y. Chen and P.B. Farnsworth 231 Ion deposition experiments as a tool for the study of the spatial distribution of analyte ions in the second vacuum stage of an inductively coupled plasma mass spectrometer

Y. Wei-min and N. Zhe-ming 241 Atomization efficiencies for indium and tin from different atomizer surfaces in graphite furnace atomic absorption spectrometry

Spectrochimica Acta Electronica
N. Daskalova, S. Velichkov, P. Slavova, E. Ivanova and L. Aleksieva 257 Application of inductively coupled plasma atomic emission spectrometry in analytical control of single crystals of potassium titanylphosphate: spectral interferences, line selection, detection limits and trace element determination

No. 3

SPECIAL ISSUE
TOTAL REFLECTION X-RAY FLUORESCENCE ANALYSIS
6th Conference on Total Reflection X-Ray Fluorescence Analysis and Related Methods (TXRF'96)
Eindhoven (The Netherlands) and Dortmund (Germany)
June 1996
Guest Editors: **Dick K.G. de Boer and Reinhold Klockenkämper**

Preface	ix	
H. Schwenke, J. Knoth, R. Günther, G. Weiner and R. Bormann	795	Depth profiling using total reflection X-ray fluorescence spectrometry alone and in combination with ion beam sputtering
A.J.G. Leenaers, J.J.A.M. Vrakking and D.K.G. de Boer	805	Glancing incidence X-ray analysis: more than just reflectivity!
G. Weiner, R. Günther, C. Michaelsen, J. Knoth, H. Schwenke and R. Bormann	813	Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry
Y. Mori, K. Uemura and K. Shimanoe	823	A depth profile fitting model for a commercial total reflection X-ray fluorescence spectrometer

P.K. de Bokx, Chr. Kok, A. Bailleul, G. Wiener and H.P. Urbach	829	Grazing-emission X-ray fluorescence spectrometry; principles and applications
K. Tsuji, K. Wagatsuma, K. Hirokawa, T. Yamada and T. Utaka	841	Development of glancing-incidence and glancing-take-off X-ray fluorescence apparatus for surface and thin-film analyses
J.A. van Kan and R.D. Vis	847	An optimized set-up for total reflection particle induced X-ray emission
K. Tsuji, K. Wagatsuma and K. Hirokawa	855	Characteristics of total reflection X-ray excited current detected with the tip of a scanning tunneling microscope
C. Streli, P. Wobrauschek, V. Bauer, P. Kregsamer, R. Görgl, P. Pianetta, R. Ryon, S. Pahlke and L. Fabry	861	Total reflection X-ray fluorescence analysis of light elements with synchrotron radiation and special X-ray tubes
J. Kawai, H. Amano, K. Hayashi, T. Horiuchi, K. Matsushige and Y. Kitajima	873	Total reflection X-ray photoelectron spectroscopy of copper phthalocyanine–gold multilayers
D. Werho, R. Gregory, S. Schauer, X. Liu, G. Carney, J. Banks, J. Knapp, B. Doyle and A.C. Diebold	881	Calibration of reference materials for total-reflection X-ray fluorescence analysis by heavy ion backscattering spectrometry
M. Funabashi, T. Utaka and T. Arai	887	Improvement of Total Reflection X-ray Fluorescence (TXRF) spectrochemical analysis for silicon wafers
P. Wobrauschek, R. Görgl, P. Kregsamer, Ch. Streli, S. Pahlke, L. Fabry, M. Haller, A. Knöchel and M. Radtke	901	Analysis of Ni on Si-wafer surfaces using synchrotron radiation excited total reflection X-ray fluorescence analysis
J. Knoth, A. Prange, H. Schneider and H. Schwenke	907	Variable X-ray excitation for total reflection X-ray fluorescence spectrometry using an Mo/W alloy anode and a tunable double multilayer monochromator
D. Węgrzynek and B. Hołyńska	915	Fundamental quantification procedure for total reflection X-ray fluorescence spectra analysis and elements determination
E.D. Greaves, G. Bernasconi, P. Wobrauschek, and C. Streli	923	Direct total-reflection X-ray fluorescence trace element analysis of organic matrix materials with a semiempirical standard

E. Haffer, D. Schmidt, P. Freimann and W. Gerwinski	935	Simultaneous determination of germanium, arsenic, tin and antimony with total-reflection X-ray fluorescence spectrometry using the hydride generation technique for matrix separation—first steps in the development of a new application
E.D. Greaves. J. Alfonso Sosa, L. Sajo-Bohus, M. Alvarez, P. Wobrauschek and Ch. Streli	945	Trace element determination of mercury by total-reflection X-ray fluorescence
J.K. Vilhunen, A. von Bohlen, M. Schmeling, R. Klockenkämper and D. Klockow	953	Total reflection X-ray fluorescence analyses of samples from oil refining and chemical industries
M. Wagner, P. Rostam-Khani, A. Wittershagen, C. Rittmeyer, B.O. Kolbesen and H. Hoffmann	961	Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry
M. Ebert, J. Dahmen, P. Hoffmann and H.M. Ortner	967	Examination of clean room aerosol particle composition by total reflection X-ray analysis and electron probe microanalysis
J. Injuk, R. van Grieken, R. Klockenkämper, A. von Bohlen and P. Kump	977	Performance and characteristics of two total-reflection X-ray fluorescence and a particle induced X-ray emission setup for aerosol analysis
M. Schmeling, R. Klockenkämper and D. Klockow	985	Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter
T. Stahlschmidt, M. Schulz and W. Dannecker	995	Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols
H. Miesbauer	1003	Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total-reflection X-ray fluorescence
B. Aster, A. von Bohlen and P. Burba	1009	Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry
K. Friese, M. Mages, K. Wendt-Potthoff and T.R. Neu	1019	Determination of heavy metals in biofilms from the River Elbe by total-reflection X-ray fluorescence spectrometry
A. Varga. G. Záray, F. Fodor and E. Cseh	1027	Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry

A. Wittershagen, P. Rostam-Khani, O. Klimmek, R. Groß, V. Zickermann, I. Zickermann, S. Gemeinhardt, A. Kröger. B. Ludwig and B.O. Kolbesen	1033	Determination of metal-cofactors in enzyme complexes by total-reflection X-ray fluorescence spectrometry
L. Benninghoff, D. von Czarnowski, E. Denkhaus and K. Lemke	1039	Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition
D. von Czarnowski, E. Denkhaus and K. Lemke	1047	Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis
A. von Bohlen and F. Meyer	1053	Microanalysis of old violin varnishes by total-reflection X-ray fluorescence
M. Wegstein, H. Urban, P. Rostam-Khani, A. Wittershagen and B.O. Kolbesen	1057	Total-reflection X-ray fluorescence spectrometry, a powerful tool for semiquantitative analysis of archaeological glass samples
M. Claes, P. de Bokx, N. Willard, P. Veny and R. van Grieken	1063	Optimization of sample preparation for grazing emission X-ray fluorescence in micro- and trace analysis applications
Book Review		
A. Prange	1071	Total-reflection X-ray Fluorescence Analysis, by R. Klockenkämper

ELSEVIER

SPECTROCHIMICA ACTA
PART B

Subject Index, Volume 52B

AAS
Characterization of analyte absorption profiles in a power-amplitude modulated inductively coupled argon plasma 503
Use of Muromac A-1 chelating resin for determination of copper and molybdenum in seawater by atomic absorption with on-line preconcentration 755
Actinides
Determination of the first ionization potential of actinide elements by resonance ionization mass spectroscopy 717
Activation energies
Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes 1
Aerosol
Performance and characteristics of two total-reflection X-ray fluorescence and a particle induced X-ray emission setup for aerosol analysis 977
Aerosol deposition
Preconcentration of analytes by aerosol deposition in Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level 113
Aerosol desolvation
Behaviour of a desolvation system based on microwave radiation heating for use in inductively coupled plasma atomic emission spectrometry 1201
Aerosol size distributions
New developments in thermospray sample introduction for atomic spectrometry 1087
Aerosol techniques
New developments in thermospray sample introduction for atomic spectrometry 1087
Airborne particulate matter
Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter 985
Al
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351
Algorithm
Irradiance distribution in the image of a tube electrothermal atomizer 1413
Alkyllead
Mechanism of formation and spatial distribution of lead atoms in quartz tube atomizers 643
Amalgam
Trace element determination of mercury by total-reflection X-ray fluorescence 945
Amalgamation
Determination of mercury by total-reflection X-ray fluorescence using amalgamation with gold 1195
Aquatic biofilms
Determination of heavy metals in biofilms from the River Elbe by total-reflection X-ray fluorescence spectrometry 1019
Aquatic humic substances
Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry 1009
Archaeological sample
Total-reflection X-ray fluorescence spectrometry, a powerful tool for semiquantitative analysis of archaeological glass samples 1057
Argon
Comparison of argon and neon as discharge gases in a direct-current glow discharge. A mathematical simulation 553
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Argon ICP
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Argon metastable atoms
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219

Ar–N_2
Computer simulation of argon–nitrogen and argon–oxygen inductively coupled plasmas 369
Ar–O_2
Computer simulation of argon–nitrogen and argon–oxygen inductively coupled plasmas 369
Arrhenius equation
Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes 1
Influence of vapor redeposition and modifiers on the Arrhenius plots of copper in graphite furnace atomic absorption spectrometry 1269
As
Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry 75
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Atmospheric aerosol
Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols 995
Atom removal
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
Atom supply
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
Atom trapping
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727
Atomic absorption spectrometry
The development of the nitrous oxide–acetylene flame for atomic absorption spectroscopy — a personal account 667
Radiotracer investigation of hydride trapping efficiency within a graphite furnace 787
Diode-laser atomic-absorption spectrometry by the double-beam–double-modulation technique 1125
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Non-spectral interference effects in platform-equipped graphite atomisers 1333
Spectral phenomena in graphite furnace AAS 1341
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Preconcentration of analytes by aerosol deposition in Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level 113
Development and investigation of microwave plasma techniques in analytical atomic spectrometry 131
Atomic emission spectrometry
Development and investigation of microwave plasma techniques in analytical atomic spectrometry 131
Determination of additives in PVC material by UV laser ablation inductively coupled plasma atomic emission spectrometry 421
Influence of the operating conditions on the efficiency of internal standardization in inductively coupled plasma atomic emission spectrometry 487
The effect of sodium on analyte ionic line intensities in inductively coupled plasma atomic emission spectrometry: influence of the operating conditions 495
Some characteristics of a new planar glow-discharge source with and without magnetic field 1161
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Atomic fluorescence spectrometry
Development and investigation of microwave plasma techniques in analytical atomic spectrometry 131
Investigation of iron determination in HCl gas using the nondispersive atomic fluorescence spectrometer with a tantalum coil atomizer 1551
Determination of lead in metallic reference materials by laser ablation combined with laser excited atomic fluorescence 1653
Separation of metal vapors for atomic spectroscopy techniques by high-temperature chromatography on graphite 1421
Atomization
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Preatomization behavior of palladium in electrothermal atomic-absorption spectrometry 1259

Influence of vapor redeposition and modifiers on the Arrhenius plots of copper in graphite furnace atomic absorption spectrometry 1269
Vaporization and atomization of the platinum group elements in the graphite furnace investigated by electrothermal vaporization-inductively coupled plasma-mass spectrometry 1575
Atomization efficiency
Atomization efficiencies for indium and tin from different atomizer surfaces in graphite furnace atomic absorption spectrometry 241
Atomization mechanism
Mechanism of formation and spatial distribution of lead atoms in quartz tube atomizers 643
Tungsten atomizer—the theory of atomization reactions 1327
Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes 1
Investigation of the formation of solid phase compounds between tellurium and interfering elements in graphite furnace atomic absorption spectrometry 1247
Au
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Automation
Direct determination of metal traces in process gases by atomic absorption spectrometry using automated analyte trapping 1459

Background correction
Spectral phenomena in graphite furnace AAS 1341
Bi
Determination of heavy metals in polar snow and ice by laser excited atomic fluorescence spectrometry with electrothermal atomization in a graphite cup 1535
Bismuth tellurite
Investigations on the determination of chromium dopant in bismuth tellurite single crystals by graphite furnace atomic absorption spectrometry 1483
Bisphenol A
Influence of iron on Bisphenol A quality 1321
Blank values
Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter 985
Bone analysis
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351

Calibration
On the possibility of characterization of thoria by spark source mass spectrometry 471
Carcinoma
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Cathode fall
Spectroscopic study of the cathode fall region of Grimm-type glow discharge in helium 745
Cathode geometry
Modeling the effect of the cathode geometry in a DC glow discharge ion source for mass spectrometry 531
CCD
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection wavelengths 675
Echelle spectrometers and charge-coupled devices 1367
Cd
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Silver and lanthanum as effective modifiers in trace determination of cadmium in nickel–base alloys by electrothermal atomic absorption spectrometry 55
Characteristic mass
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
Charge transfer
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Chemical effect
Chemical effect on L X-ray fluorescence cross-sections of Hg, Pb and Bi compounds 1167
Chemical modifier
Silver and lanthanum as effective modifiers in trace

determination of cadmium in nickel–base alloys by electrothermal atomic absorption spectrometry 55
Electrothermal atomic absorption spectrometric determination of copper in nickel-base alloys with various chemical modifiers 1497
The vaporization of phosphorus compounds and the use of chemical modifiers for the determination of phosphorus by electrothermal vaporization inductively coupled plasma mass spectrometry 517
Investigation of the formation of solid phase compounds between tellurium and interfering elements in graphite furnace atomic absorption spectrometry 1247
Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry 75
Chemical state analysis
Resonant X-ray scattering of boron compounds 593
Chloride interference
The interference effect of more than one salt in graphite furnace atomic absorption spectrometry. Part 1: Effect of magnesium chloride–sodium chloride mixture on manganese 621
Clean room
Examination of clean room aerosol particle composition by total reflection X-ray analysis and electron probe microanalysis 967
Cluster analysis
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Collisional ionization
Analytical time-resolved laser enhanced ionization spectroscopy I. Collisional ionization and photoionization of the Hg Rydberg states in a low pressure gas 295
Collisional-radiative model
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Colon
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Combustion diagnostics
Developments of laser-induced fluorescence for two-dimensional multi-species imaging in flames 1105
Convection
Improved performance of transverse heated graphite atomizers by elimination of convective gas flows 1431
Coral
The optimization of the precision of the strontium/calcium ratio measurement in coral samples by radioisotope induced X-ray fluorescence 1645
Cr
Speciation of chromium using reversed phase-high performance liquid chromatography coupled to different spectrometric detection methods 189
Investigations on the determination of chromium dopant in bismuth tellurite single crystals by graphite furnace atomic absorption spectrometry 1483
Crater
Calculation of crater profiles on a flat cathode in a direct current glow discharge 765
Cross sections
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Cu
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Influence of vapor redeposition and modifiers on the Arrhenius plots of copper in graphite furnace atomic absorption spectrometry 1269
Electrothermal atomic absorption spectrometric determination of copper in nickel-base alloys with various chemical modifiers 1497

Density
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Depth profile
Total reflection X-ray fluorescence analysis of light elements 281
Depth profiling using total reflection X-ray fluorescence spectrometry alone and in combination with ion beam sputtering 795
Glancing incidence X-ray analysis: more than just reflectivity 805
Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry 813
A depth profile fitting model for a commercial total reflection X-ray fluorescence spectrometer 823

Derivative
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727
Detection limit
An examination of relative trends of atomic detection limits in the inductively coupled plasma 125
Performance and characteristics of two total-reflection X-ray fluorescence and a particle induced X-ray emission setup for aerosol analysis 977
New developments in thermospray sample introduction for atomic spectrometry 1087
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Diagnostics
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219
Diesel emission particles
Total reflection X-ray fluorescence analyses of samples from oil refining and chemical industries 953
Differential mobility analyser
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Diffuse scattering
Glancing incidence X-ray analysis: more than just reflectivity 805
Diffusion
Measurements of neutral atom diffusion and electron–ion recombination by laser enhanced ionisation and planar laser induced fluorescence in an air–acetylene flame 459
Dilution method
Quantitative electron probe microanalysis of metallic oxide mixtures applying an empirical calibration technique 67
Diode laser
Improvement of the wavelength tunability of etalon-type laser diodes and mode recognition and stabilization in diode laser spectrometers 1215
Diode-laser atomic-absorption spectrometry by the double-beam–double-modulation technique 1125
An investigation of the 2f-wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663
Direct current glow discharge
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219
Calculation of crater profiles on a flat cathode in a direct current glow discharge 765
Investigations into mild conditions for reduction of Se(VI) to Se(IV) and for hydride generation in determination of selenium by direct current plasma atomic emission spectrometry 163
Comparison of argon and neon as discharge gases in a direct-current glow discharge. A mathematical simulation 553
Discharge modeling
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219
Modeling the effect of the cathode geometry in a DC glow discharge ion source for mass spectrometry 531
Discharge parameters
Some characteristics of a new planar glow-discharge source with and without magnetic field 1161
Dissociative evaporation theory
Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes 1
Dopants
Application of inductively coupled plasma atomic emission spectrometry in analytical control of single crystals of potassium titanylphosphate: spectral interferences, line selection, detection limits and trace element determination 257
Dynamic range
Expanding the working concentration range in graphite furnace atomic absorption spectrometry. Effect of non-stop flow on the determination of tin 1223

Echelle grating
Echelle spectrometers and charge-coupled devices 1367
Echelle spectrometer
Echelle spectrometers and charge-coupled devices 1367
Electric field
Spectroscopic study of the cathode fall region of Grimm-type glow discharge in helium 745
Electron density
Comparison of electron concentrations, electron temperatures, gas kinetic temperatures, and excitation temperatures in argon ICPs operated at 27 and 40 MHz 1173

An examination of relative trends of atomic detection limits in the inductively coupled plasma 125
An imaging-based instrument for fundamental plasma studies 83
Electron–ion recombination
Measurements of neutral atom diffusion and electron–ion recombination by laser enhanced ionisation and planar laser induced fluorescence in an air–acetylene flame 459
Electron source
Characteristics of fast electrons from Grimm glow discharge He plasmas as an electron source 1587
Electron temperature
An imaging-based instrument for fundamental plasma studies 83
Electrostatic deposition
Size and distribution of particles deposited electrostatically onto the platform of a graphite furnace obtained using laser ablation sampling 1525
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Electrothermal atomic absorption spectrometry (ETAAS)
Influence of vapor redeposition and modifiers on the Arrhenius plots of copper in graphite furnace atomic absorption spectrometry 1269
Interpretation of atomization mechanisms in electrothermal atomic absorption spectrometry by analysis of the absolute rates of the processes 1
Comparison of chemical modifiers for the determination of selenium by electrothermal atomic-absorption spectrometry 1283
Social report of the Second European Furnace Symposium, St. Petersburg, Russia, 26–30 May 1996 1235
Colloidal palladium—a promising chemical modifier for electrothermal atomic absorption spectrometry 1293
Investigation of the interaction of molybdenum with a graphite surface by electrothermal atomization atomic-absorption spectroscopy and scanning tunnelling microscopy 1305
Influence of iron on Bisphenol A quality 1321
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351
Adaptation of the filter furnace atomizer for atomic absorption determination of less volatile metals 1377
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Direct determination of metal traces in process gases by atomic absorption spectrometry using automated analyte trapping 1459
Microwave-assisted sample preparation and preconcentration for ETAAS 1469
Investigations on the determination of chromium dopant in bismuth tellurite single crystals by graphite furnace atomic absorption spectrometry 1483
Electrothermal atomization
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Spectral phenomena in graphite furnace AAS 1341
Determination of heavy metals in polar snow and ice by laser excited atomic fluorescence spectrometry with electrothermal atomization in a graphite cup
. of iron determination in HCl glass using the nondispersive atomic fluorescence spectrometer with a tantalum coil atomizer 1551
Investigation of the formation of solid phase compounds between tellurium and interfering elements in graphite furnace atomic absorption spectrometry 1247
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Irradiance distribution in the image of a tube electrothermal atomizer 1413
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection wavelengths 675
Electrothermal vaporization
Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry 75
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
The vaporization of phosphorus compounds and the use of chemical modifiers for the determination of phosphorus by electrothermal vaporization inductively coupled plasma mass spectrometry 517
Element detection
An investigation of the 2f-wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663
Element fingerprint
Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry 961
Emission yield
Effect of discharge parameters on emission yields in a radio-frequency glow-discharge atomic-emission source 567

End-capped atomizers
Improved performance of transverse heated graphite atomizers by elimination of convective gas flows 1431
Energy-dispersive detection
Total reflection X-ray fluorescence analysis of light elements 281
Grazing-emission X-ray fluorescence spectrometry: principles and applications 829
Quantitative electron probe microanalysis of metallic oxide mixtures applying an empirical calibration technique 67
Total reflection X-ray fluorescence analysis of light elements with synchrotron radiation and special X-ray tubes 861
Environmental samples
New developments in thermospray sample introduction for atomic spectrometry 1087
Determination of mercury by total-reflection X-ray fluorescence using amalgamation with gold 1195
Enzymatic samples
Determination of metal-cofactors in enzyme complexes by total-reflection X-ray fluorescence spectrometry 1033
Graphite furnace atomic absorption spectrometry and environmental challenges at the ultratrace level—a review 1451
Estuarine water
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Ethene
The continuous on-line monitoring of the trace elemental composition of industrial ethene gas by means of inductively coupled plasma mass spectrometry 1695
ETV-ICP-MS
Preatomization behavior of palladium in electrothermal atomic-absorption spectrometry 1259
Vaporization and atomization of the platinum group elements in the graphite furnace investigated by electrothermal vaporization-inductively coupled plasma-mass spectrometry 1575

Factorial optimization
Factorial optimization of data acquisition factors for lead isotope ratio determination by inductively coupled plasma mass spectrometry 177
Fast electrons
Characteristics of fast electrons from Grimm glow discharge He plasmas as an electron source 1587
Fe
Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry 1027
Influence of iron on Bisphenol A quality 1321
Field reversal
Modeling the effect of the cathode geometry in a DC glow discharge ion source for mass spectrometry 531
Figures of merit
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Filter furnace
Adaptation of the filter furnace atomizer for atomic absorption determination of less volatile metals 1377
Fish
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
Flame atomic absorption spectrometry
The development of the nitrous oxide–acetylene flame for atomic absorption spectroscopy — a personal account 667
New developments in thermospray sample introduction for atomic spectrometry 1087
Flame atomic absorption spectrometry
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727
Flow injection
New developments in thermospray sample introduction for atomic spectrometry 1087
Flow rate effects
Expanding the working concentration range in graphite furnace atomic absorption spectrometry. Effect of non-stop flow on the determination of tin 1223
Food
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Fundamental plasma studies
An imaging-based instrument for fundamental plasma studies 83

Gases
Direct determination of metal traces in process gases by atomic absorption spectrometry using automated analyte trapping 1459
Gas-kinetic temperature
An imaging-based instrument for fundamental plasma studies 83
Gas monitoring
Investigation of iron determination in HCl glass using

the nondispersive atomic fluorescence spectrometer with a tantalum coil atomizer 1551
Gd
Multivariate calibration standardization used for the reduction of standards needed for multivariate calibration in inductively coupled plasma mass spectrometry 445
Gibbs free energy
Tungsten atomizer—the theory of atomization reactions 1327
Glancing incidence
An optimized set-up for total reflection particle induced X-ray emission 847
Glass
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Total-reflection X-ray fluorescence spectrometry, a powerful tool for semiquantitative analysis of archaeological glass samples 1057
Glow discharge
Comparison of argon and neon as discharge gases in a direct-current glow discharge. A mathematical simulation 553
Study of a pulsed glow discharge ion source for time-of-flight mass spectrometry 633
Some characteristics of a new planar glow-discharge source with and without magnetic field 1161
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Glow discharge mass spectrometry
Modeling the effect of the cathode geometry in a DC glow discharge ion source for mass spectrometry 531
Graphite furnace
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Preconcentration of analytes by aerosol deposition in Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level 113
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection wavelengths 675
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Non-spectral interference effects in platform-equipped graphite atomisers 1333
Spectral phenomena in graphite furnace AAS 1341
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
Investigations on the determination of chromium dopant in bismuth tellurite single crystals by graphite furnace atomic absorption spectrometry 1483
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Removal of water and hydrogen from graphite tubes investigated by electrothermal vaporization inductively coupled plasma mass spectrometry 1545
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Graphite furnace atomic absorption spectrometry and environmental challenges at the ultratrace level—a review 1451
Silver and lanthanum as effective modifiers in trace determination of cadmium in nickel–base alloys by electrothermal atomic absorption spectrometry 55
Atomization efficiencies for indium and tin from different atomizer surfaces in graphite furnace atomic absorption spectrometry 241
The interference effect of more than one salt in graphite furnace atomic absorption spectrometry. Part 1: Effect of magnesium chloride-sodium chloride mixture on manganese 621
Expanding the working concentration range in graphite furnace atomic absorption spectrometry. Effect of non-stop flow on the determination of tin 1223
Improved performance of transverse heated graphite atomizers by elimination of convective gas flows 1431
Electrothermal atomic absorption spectrometric determination of copper in nickel-base alloys with various chemical modifiers 1497
Graphite furnace-laser induced fluorescence
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Graphite surface
Investigation of the interaction of molybdenum with a graphite surface by electrothermal atomization atomic-absorption spectroscopy and scanning tunnelling microscopy 1305
Grazing emission X-ray fluorescence
Optimization of sample preparation for grazing emis-

sion X-ray fluorescence in micro- and trace analysis applications 1063
Grazing-emission X-ray fluorescence spectrometry: principles and applications 829
Grimm glow discharge
Spectroscopic study of the cathode fall region of Grimm-type glow discharge in helium 745
Characteristics of fast electrons from Grimm glow discharge He plasmas as an electron source 1587
Groundwater
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389

Heat exchange
Adaptation of the filter furnace atomizer for atomic absorption determination of less volatile metals 1377
Heavy metals
Determination of heavy metals in biofilms from the River Elbe by total-reflection X-ray fluorescence spectrometry 1019
Microwave-assisted sample preparation and preconcentration for ETAAS 1469
Hg
Analytical time-resolved laser enhanced ionization spectroscopy I. Collisional ionization and photoionization of the Hg Rydberg states in a low pressure gas 295
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
Trace element determination of mercury by total-reflection X-ray fluorescence 945
Determination of mercury by total-reflection X-ray fluorescence using amalgamation with gold 1195
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139
High resolution echelle
Analytical characterization of a planar magnetron radio frequency glow-discharge source 579
High-temperature chromatography
Separation of metal vapors for atomic spectroscopy techniques by high-temperature chromatography on graphite 1421
High-temperature superconductor
Diagnostic study of laser ablated $YBa_2Cu_3O_y$ plumes 339
History
The development of the nitrous oxide–acetylene flame for atomic absorption spectroscopy — a personal account 667
Social report of the Second European Furnace Symposium, St. Petersburg, Russia, 26–30 May 1996 1235
Hydride generation
Investigations into mild conditions for reduction of Se(VI) to Se(IV) and for hydride generation in determination of selenium by direct current plasma atomic emission spectrometry 163
Radiotracer investigation of hydride trapping efficiency within a graphite furnace 787
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Simultaneous determination of germanium, arsenic, tin and antimony with total-reflection X-ray fluorescence spectrometry using the hydride generation technique for matrix separation—first steps in the development of a new application 935
Hydride in situ trapping in graphite atomizer
Radiotracer investigation of hydride trapping efficiency within a graphite furnace 787
Hydrogen
Tungsten atomizer—the theory of atomization reactions 1327
Removal of water and hydrogen from graphite tubes investigated by electrothermal vaporization inductively coupled plasma mass spectrometry 1545
Hyphenated methods
Speciation of chromium using reversed phase-high performance liquid chromatography coupled to different spectrometric detection methods 189

Ice analysis
Determination of heavy metals in polar snow and ice by laser excited atomic fluorescence spectrometry with electrothermal atomization in a graphite cup 1535
ICP-AES
An examination of relative trends of atomic detection limits in the inductively coupled plasma 125
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
An imaging-based instrument for fundamental plasma studies 83
The influence of incompletely desolvated droplets and vaporizing particles on chemical matrix effects in inductively coupled plasma spectrometry: time-gated optical emission and laser-induced fluorescence measurements 353
Application of inductively coupled plasma atomic

emission spectrometry in analytical control of single crystals of potassium titanylphosphate: spectral interferences, line selection, detection limits and trace element determination 257
Computer simulation of argon–nitrogen and argon–oxygen inductively coupled plasmas 369
High-resolution spectra of selected rare earth elements and spectral interferences studied by inductively coupled plasma–atomic emission spectroscopy (ICP–AES) 1567
Effect of the chemical form of the additives in poly(vinyl chloride) and poly(ethylene) materials on laser ablation efficiency using inductively coupled plasma atomic emission spectrometry 1687
Determination of additives in PVC material by UV laser ablation inductively coupled plasma atomic emission spectrometry 421
Influence of the operating conditions on the efficiency of internal standardization in inductively coupled plasma atomic emission spectrometry 487
The effect of sodium on analyte ionic line intensities in inductively coupled plasma atomic emission spectrometry: influence of the operating conditions 495
Characterization of analyte absorption profiles in a power-amplitude modulated inductively coupled argon plasma 503
Quantitative survey analysis by using the full inductively coupled plasma emission spectra taken from a segmented charge coupled device detector: feasibility study 321
New developments in thermospray sample introduction for atomic spectrometry 1087
Direct determination of trace elements in niobium, tantalum and their oxides by inductively coupled plasma atomic emission spectrometry after microwave dissolution 1151
Behaviour of a desolvation system based on microwave radiation heating for use in inductively coupled plasma atomic emission spectrometry 1201
Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry 75
Factorial optimization of data acquisition factors for lead isotope ratio determination by inductively coupled plasma mass spectrometry 177
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
New developments in thermospray sample introduction for atomic spectrometry 1087

ICP frequency
Comparison of electron concentrations, electron temperatures, gas kinetic temperatures, and excitation temperatures in argon ICPs operated at 27 and 40 MHz 1173

ICP mass spectrometry
The vaporization of phosphorus compounds and the use of chemical modifiers for the determination of phosphorus by electrothermal vaporization inductively coupled plasma mass spectrometry 517
Ion deposition experiments as a tool for the study of the spatial distribution of analyte ions in the second vacuum stage of an inductively coupled plasma mass spectrometer 231
Computer simulation of argon–nitrogen and argon–oxygen inductively coupled plasmas 369
Removal of water and hydrogen from graphite tubes investigated by electrothermal vaporization inductively coupled plasma mass spectrometry 1545
The continuous on-line monitoring of the trace elemental composition of industrial ethene gas by means of inductively coupled plasma mass spectrometry 1695
Multivariate calibration standardization used for the reduction of standards needed for multivariate calibration in inductively coupled plasma mass spectrometry 445

Imaging
Irradiance distribution in the image of a tube electrothermal atomizer 1413

Imaging-based instrument
An imaging-based instrument for fundamental plasma studies 83

Impaction
Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter 985
Examination of clean room aerosol particle composition by total reflection X-ray analysis and electron probe microanalysis 967
Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols 995

Impurities
Application of inductively coupled plasma atomic emission spectrometry in analytical control of single crystals of potassium titanylphosphate: spectral interferences, line selection, detection limits and trace element determination 257

In and Sn
Atomization efficiencies for indium and tin from

different atomizer surfaces in graphite furnace atomic absorption spectrometry 241
Inner-shell ionisation
Measurement of Ll/Lα intensity ratios for elements in the region $57 \leq Z \leq 92$ by a Si(Li) detector 201
Insulin
Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry 961
Intensity ratio
Measurement of Ll/Lα intensity ratios for elements in the region $57 \leq Z \leq 92$ by a Si(Li) detector 201
Interference
Non-spectral interference effects in platform-equipped graphite atomisers 1333
Investigation of the formation of solid phase compounds between tellurium and interfering elements in graphite furnace atomic absorption spectrometry 1247
Internal standard
Influence of the operating conditions on the efficiency of internal standardization in inductively coupled plasma atomic emission spectrometry 487
Ion backscattering spectrometry (IBS)
Calibration of reference materials for total-reflection X-ray fluorescence analysis by heavy ion backscattering spectrometry 881
Ion beam
Ion deposition experiments as a tool for the study of the spatial distribution of analyte ions in the second vacuum stage of an inductively coupled plasma mass spectrometer 231
Depth profiling using total reflection X-ray fluorescence spectrometry alone and in combination with ion beam sputtering 795
Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry 813
Ion number density
The influence of incompletely desolvated droplets and vaporizing particles on chemical matrix effects in inductively coupled plasma spectrometry: time-gated optical emission and laser-induced fluorescence measurements 353
Ion source
Study of a pulsed glow discharge ion source for time-of-flight mass spectrometry 633
Ionisation
Diagnostic study of laser ablated $YBa_2Cu_3O_y$ plumes 339
Ionization potentials
Determination of the first ionization potential of actinide elements by resonance ionization mass spectroscopy 717
Iridium modifier
Determination of heavy metals in polar snow and ice by laser excited atomic fluorescence spectrometry with electrothermal atomization in a graphite cup 1535
Isotope ratio
A theoretical study of the isotope selective excitation of ^{138}La from $^2D_{3/2,5/2}$ states 735
Isotopic selectivity
A theoretical study of the isotope selective excitation of ^{138}La from $^2D_{3/2,5/2}$ states 735

JABO method
Quantitative electron probe microanalysis of metallic oxide mixtures applying an empirical calibration technique 67

Kinetic energy
Ion kinetic energy distributions and their relationship to fundamental plasma parameters in a radio frequency glow discharge source 1627
Kinetics
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239

Lability
Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry 1009
Langmuir probe
Ion kinetic energy distributions and their relationship to fundamental plasma parameters in a radio frequency glow discharge source 1627
Lanthanum
A theoretical study of the isotope selective excitation of ^{138}La from $^2D_{3/2,5/2}$ states 735
Laser ablation
Diagnostic study of laser ablated $YBa_2Cu_3O_y$ plumes 339
Determination of additives in PVC material by UV laser ablation inductively coupled plasma atomic emission spectrometry 421
Size and distribution of particles deposited electrostatically onto the platform of a graphite furnace obtained using laser ablation sampling 1525
Time-resolved resonance shadow imaging of laser-produced lead and tin plasmas 1617
Determination of lead in metallic reference materials by laser ablation combined with laser excited atomic fluorescence 1653
Effect of the chemical form of the additives in poly(vinyl chloride) and poly(ethylene) materials on

laser ablation efficiency using inductively coupled plasma atomic emission spectrometry 1687
Laser cleaning
Laser-induced breakdown spectroscopy as a diagnostic technique for the laser cleaning of marble 41
Laser enhanced ionisation
Measurements of neutral atom diffusion and electron–ion recombination by laser enhanced ionisation and planar laser induced fluorescence in an air–acetylene flame 459
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139
Laser excited atomic fluorescence (LEAF)
Determination of heavy metals in polar snow and ice by laser excited atomic fluorescence spectrometry with electrothermal atomization in a graphite cup 1535
Determination of lead in metallic reference materials by laser ablation combined with laser excited atomic fluorescence 1653
Laser-induced breakdown spectroscopy
Elemental analysis of metals under water using laser-induced breakdown spectroscopy 25
Laser-induced breakdown spectroscopy as a diagnostic technique for the laser cleaning of marble 41
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219
The influence of incompletely desolvated droplets and vaporizing particles on chemical matrix effects in inductively coupled plasma spectrometry: time-gated optical emission and laser-induced fluorescence measurements 353
Measurements of neutral atom diffusion and electron–ion recombination by laser enhanced ionisation and planar laser induced fluorescence in an air–acetylene flame 459
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection waveiengths 675
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Developments of laser-induced fluorescence for two-dimensional multi-species imaging in flames 1105
Laser plasma
Time-resolved resonance shadow imaging of laser-produced lead and tin plasmas 1617
Investigations on nanosecond laser produced plasma in air from the multi-component material $YBa_2Cu_3O_7$ 657
Laser spark
Elemental analysis of metals under water using laser-induced breakdown spectroscopy 25
Lead isotope ratio
Factorial optimization of data acquisition factors for lead isotope ratio determination by inductively coupled plasma mass spectrometry 177
Light elements
Total reflection X-ray fluorescence analysis of light elements 281
Total reflection X-ray fluorescence analysis of light elements with synchrotron radiation and special X-ray tubes 861
Line-shape
Spectroscopic applications of the plasma dispersion function. II: An asymmetric lineshape model and the complex susceptibility 1113
Local thermodynamic equilibrium (LTE)
Comparison of electron concentrations, electron temperatures, gas kinetic temperatures, and excitation temperatures in argon ICPs operated at 27 and 40 MHz 1173

Magnesium modifier
Colloidal palladium—a promising chemical modifier for electrothermal atomic absorption spectrometry 1293
Magnetic enhancement
Some characteristics of a new planar glow-discharge source with and without magnetic field 1161
Marble
Laser-induced breakdown spectroscopy as a diagnostic technique for the laser cleaning of marble 41
Mass spectrometry
Development and investigation of microwave plasma techniques in analytical atomic spectrometry 131
Mathematical modelling
Quantitative electron probe microanalysis of metallic oxide mixtures applying an empirical calibration technique 67
Comparison of argon and neon as discharge gases in a direct-current glow discharge. A mathematical simulation 553
Matrix effect
New developments in thermospray sample introduction for atomic spectrometry 1087
Simultaneous determination of germanium, arsenic, tin and antimony with total-reflection X-ray fluorescence spectrometry using the hydride generation

technique for matrix separation—first steps in the development of a new application 935
Adaptation of the filter furnace atomizer for atomic absorption determination of less volatile metals 1377
Matrix modifier
Comparison of chemical modifiers for the determination of selenium by electrothermal atomic-absorption spectrometry 1283
Mechanism
The vaporization of phosphorus compounds and the use of chemical modifiers for the determination of phosphorus by electrothermal vaporization inductively coupled plasma mass spectrometry 517
Memory effect
Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter 985
Metal atomizer
Investigation of iron determination in HCl gas using the nondispersive atomic fluorescence spectrometer with a tantalum coil atomizer 1551
Metal-cofactors
Determination of metal-cofactors in enzyme complexes by total-reflection X-ray fluorescence spectrometry 1033
Metals
Direct determination of metal traces in process gases by atomic absorption spectrometry using automated analyte trapping 1459
Determination of lead in metallic reference materials by laser ablation combined with laser excited atomic fluorescence 1653
Mg
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Michelson interferometry
Investigations on nanosecond laser produced plasma in air from the multi-component material $YBa_2Cu_3O_7$ 657
Microsecond-pulse glow discharge
Study of a pulsed glow discharge ion source for time-of-flight mass spectrometry 633
Microtome
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Microwave desolvation
Behaviour of a desolvation system based on microwave radiation heating for use in inductively coupled plasma atomic emission spectrometry 1201
Microwave digestion
Microwave-assisted sample preparation and preconcentration for ETAAS 1469
Direct determination of trace elements in niobium, tantalum and their oxides by inductively coupled plasma atomic emission spectrometry after microwave dissolution 1151
Microwave induced plasma
Development and investigation of microwave plasma techniques in analytical atomic spectrometry 131
Microwave heating
Behaviour of a desolvation system based on microwave radiation heating for use in inductively coupled plasma atomic emission spectrometry 1201
Mn
The interference effect of more than one salt in graphite furnace atomic absorption spectrometry. Part 1: Effect of magnesium chloride–sodium chloride mixture on manganese 621
Mo
Investigation of the interaction of molybdenum with a graphite surface by electrothermal atomization atomic-absorption spectroscopy and scanning tunnelling microscopy 1305
Mode recognition
Improvement of the wavelength tunability of etalon-type laser diodes and mode recognition and stabilization in diode laser spectrometers 1215
Modifier
Influence of vapor redeposition and modifiers on the Arrhenius plots of copper in graphite furnace atomic absorption spectrometry 1269
Colloidal palladium—a promising chemical modifier for electrothermal atomic absorption spectrometry 1293
Vaporization and atomization of the platinum group elements in the graphite furnace investigated by electrothermal vaporization-inductively coupled plasma-mass spectrometry 1575
Modulation
Characterization of analyte absorption profiles in a power-amplitude modulated inductively coupled argon plasma 503
Molybdenum/tungsten anode
Variable X-ray excitation for total reflection X-ray fluorescence spectrometry using an Mo/W alloy anode and a tunable double multilayer monochromator 907
Monte Carlo simulation
Calculation of crater profiles on a flat cathode in a direct current glow discharge 765

Multicomponent analysis
Quantitative survey analysis by using the full inductively coupled plasma emission spectra taken from a segmented charge coupled device detector: feasibility study 321
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389
Multielement determination
Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total-reflection X-ray fluorescence 1003
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Multilayer monochromator
Variable X-ray excitation for total reflection X-ray fluorescence spectrometry using an Mo/W alloy anode and a tunable double multilayer monochromator 907
Multispecies imaging
Developments of laser-induced fluorescence for two-dimensional multi-species imaging in flames 1105
Multivariate calibration
Multivariate calibration standardization used for the reduction of standards needed for multivariate calibration in inductively coupled plasma mass spectrometry 445
Muromac A-1
Use of Muromac A-1 chelating resin for determination of copper and molybdenum in seawater by atomic absorption with on-line preconcentration 755

Nb
Direct determination of trace elements in niobium, tantalum and their oxides by inductively coupled plasma atomic emission spectrometry after microwave dissolution 1151
Neon
Comparison of argon and neon as discharge gases in a direct-current glow discharge. A mathematical simulation 553
Nickel-base alloy
Electrothermal atomic absorption spectrometric determination of copper in nickel-base alloys with various chemical modifiers 1497
Silver and lanthanum as effective modifiers in trace determination of cadmium in nickel–base alloys by electrothermal atomic absorption spectrometry 55
NIST water (1643d)
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Nitrous oxide–acetylene flame
The development of the nitrous oxide–acetylene flame for atomic absorption spectroscopy — a personal account 667
Noble metals
Microwave-assisted sample preparation and preconcentration for ETAAS 1469
Noise
Factorial optimization of data acquisition factors for lead isotope ratio determination by inductively coupled plasma mass spectrometry 177

On-line monitoring
The continuous on-line monitoring of the trace elemental composition of industrial ethene gas by means of inductively coupled plasma mass spectrometry 1695
On-line preconcentration
Use of Muromac A-1 chelating resin for determination of copper and molybdenum in seawater by atomic absorption with on-line preconcentration 755
Optically thick conditions
An investigation of the 2f-wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663
Organic sample
Direct total-reflection X-ray fluorescence trace element analysis of organic matrix materials with a semi-empirical standard 923
Organic solvents
Multivariate statistical characterization of the tolerance of argon inductively coupled plasmas to organic solvents 103

Palladium colloid
Colloidal palladium—a promising chemical modifier for electrothermal atomic absorption spectrometry 1293
Palladium modifier
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
Radiotracer investigation of hydride trapping efficiency within a graphite furnace 787
Preatomization behavior of palladium in electrothermal atomic-absorption spectrometry 1259
Colloidal palladium—a promising chemical modifier for electrothermal atomic absorption spectrometry 1293

Comparison of chemical modifiers for the determination of selenium by electrothermal atomic-absorption spectrometry 1283
Partial least squares regression (PLS)
Multivariate calibration standardization used for the reduction of standards needed for multivariate calibration in inductively coupled plasma mass spectrometry 445
Pb
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727
Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry 1027
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Time-resolved resonance shadow imaging of laser-produced lead and tin plasmas 1617
Determination of lead in metallic reference materials by laser ablation combined with laser excited atomic fluorescence 1653
Pd
Preatomization behavior of palladium in electrothermal atomic-absorption spectrometry 1259
Pharmaceuticals
Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry 961
Phenol
Total reflection X-ray fluorescence analyses of samples from oil refining and chemical industries 953
Phosphorus
The vaporization of phosphorus compounds and the use of chemical modifiers for the determination of phosphorus by electrothermal vaporization inductively coupled plasma mass spectrometry 517
Photoionisation
Measurement of Ll/Lα intensity ratios for elements in the region $57 \leq Z \leq 92$ by a Si(Li) detector 201
Analytical time-resolved laser enhanced ionization spectroscopy I. Collisional ionization and photoionization of the Hg Rydberg states in a low pressure gas 295
PIXE
Performance and characteristics of two total-reflection X-ray fluorescence and a particle induced X-ray emission setup for aerosol analysis 977
Planar magnetron
Analytical characterization of a planar magnetron radio frequency glow-discharge source 579
Plasma dispersion
Spectroscopic applications of the plasma dispersion function. II: An asymmetric lineshape model and the complex susceptibility 1113
Plasma ionization
Investigations on nanosecond laser produced plasma in air from the multi-component material $YBa_2Cu_3O_7$ 657
Plasma parameters
Ion kinetic energy distributions and their relationship to fundamental plasma parameters in a radio frequency glow discharge source 1627
Plasma temperature
Comparison of electron concentrations, electron temperatures, gas kinetic temperatures, and excitation temperatures in argon ICPs operated at 27 and 40 MHz 1173
Polyatomic ion interference
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389
Polycarbonate
Optimization of sample preparation for grazing emission X-ray fluorescence in micro- and trace analysis applications 1063
Polymer
Effect of the chemical form of the additives in poly(vinyl chloride) and poly(ethylene) materials on laser ablation efficiency using inductively coupled plasma atomic emission spectrometry 1687
Population mechanisms
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Pore water
Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total-reflection X-ray fluorescence 1003
Porous graphite
Separation of metal vapors for atomic spectroscopy techniques by high-temperature chromatography on graphite 1421
Preconcentration
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Preconcentration of analytes by aerosol deposition in

Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level 113
Pressure broadening
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139
Pressure digestion
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Pressure shifts
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139
Principal component analysis
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Pt group
Vaporization and atomization of the platinum group elements in the graphite furnace investigated by electrothermal vaporization-inductively coupled plasma-mass spectrometry 1575
PVC materials
Determination of additives in PVC material by UV laser ablation inductively coupled plasma atomic emission spectrometry 421

Quality control
Examination of clean room aerosol particle composition by total reflection X-ray analysis and electron probe microanalysis 967
Influence of iron on Bisphenol A quality 1321
Quartz tube
Mechanism of formation and spatial distribution of lead atoms in quartz tube atomizers 643

Radio frequency glow discharge
Effect of discharge parameters on emission yields in a radio-frequency glow-discharge atomic-emission source 567
Analytical characterization of a planar magnetron radio frequency glow-discharge source 579
Ion kinetic energy distributions and their relationship to fundamental plasma parameters in a radio frequency glow discharge source 1627
Radioisotope XRF
The optimization of the precision of the strontium/calcium ratio measurement in coral samples by radioisotope induced X-ray fluorescence 1645
Radiotracer
Radiotracer investigation of hydride trapping efficiency within a graphite furnace 787
Rare earth
High-resolution spectra of selected rare earth elements and spectral interferences studied by inductively coupled plasma–atomic emission spectroscopy (ICP–AES) 1567
Rate coefficients
Magnesium as a representative analyte metal in argon inductively coupled plasmas. I. An extensive collisional-radiative model 599
Ray-tracing
Irradiance distribution in the image of a tube electrothermal atomizer 1413
Rb
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Rectum
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Reference material
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Calibration of reference materials for total-reflection X-ray fluorescence analysis by heavy ion backscattering spectrometry 881
Biological and environmental reference materials: update 1996 1073
Resonance ionisation mass spectrometry (RIMS)
A theoretical study of the isotope selective excitation of ^{138}La from $^{2}D_{3/2,5/2}$ states 735
Determination of the first ionization potential of actinide elements by resonance ionization mass spectroscopy 717
Review
The development of the nitrous oxide–acetylene flame for atomic absorption spectroscopy — a personal account 667
River water
Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total-reflection X-ray fluorescence 1003
Determination of heavy metals in biofilms from the River Elbe by total-reflection X-ray fluorescence spectrometry 1019
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Robustness
Influence of the operating conditions on the efficiency of internal standardization in inductively coupled plasma atomic emission spectrometry 487

The effect of sodium on analyte ionic line intensities in inductively coupled plasma atomic emission spectrometry: influence of the operating conditions 495
Rowland mounting
Echelle spectrometers and charge-coupled devices 1367
Rubidium
An investigation of the 2f-wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663
Rydberg levels
Analytical time-resolved laser enhanced ionization spectroscopy I. Collisional ionization and photoionization of the Hg Rydberg states in a low pressure gas 295
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139

Saha Boltzmann Equilibrium
Magnesium as a representative analyte metal in argon inductively coupled plasmas. II. Population mechanisms in analytical zones of different spectrochemical systems 609
Sample modulation
Diode-laser atomic-absorption spectrometry by the double-beam–double-modulation technique 1125
Sample preparation
Optimization of sample preparation for grazing emission X-ray fluorescence in micro- and trace analysis applications 1063
Comparison of hydride generation and graphite furnace atomic absorption spectrometry for the determination of arsenic in food 1517
Sb
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Comparison of AAS with hydride concentration in a graphite furnace with other spectrometric techniques 1509
Scanning tunneling microscopy
Characteristics of total reflection X-ray excited current detected with the tip of a scanning tunneling microscope 855
Investigation of the interaction of molybdenum with a graphite surface by electrothermal atomization atomic-absorption spectroscopy and scanning tunnelling microscopy 1305
Se
Comparison of chemical modifiers for the determination of selenium by electrothermal atomic-absorption spectrometry 1283
Sea water
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Use of Muromac A-1 chelating resin for determination of copper and molybdenum in seawater by atomic absorption with on-line preconcentration 755
Sea water temperature
The optimization of the precision of the strontium/calcium ratio measurement in coral samples by radioisotope induced X-ray fluorescence 1645
Sediment
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total-reflection X-ray fluorescence 1003
Sedimentation error
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Semiempirical standard model
Direct total-reflection X-ray fluorescence trace element analysis of organic matrix materials with a semi-empirical standard 923
Semiquantitative analysis
Total-reflection X-ray fluorescence spectrometry, a powerful tool for semiquantitative analysis of archaeological glass samples 1057
Sensitivity
Performances and practical applications of simultaneous multi-element electrothermal atomic absorption spectrometry the case of the SIMAA 6000 1443
Serum analysis
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351
Sh
Expanding the working concentration range in graphite furnace atomic absorption spectrometry. Effect of non-stop flow on the determination of tin 1223
Time-resolved resonance shadow imaging of laser-produced lead and tin plasmas 1617
Shadowgraph
Time-resolved resonance shadow imaging of laser-produced lead and tin plasmas 1617
Short-time measurement
Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols 995
Shot noise
Diode-laser atomic-absorption spectrometry by the double-beam–double-modulation technique 1125

Silicon wafers
Improvement of total reflection X-ray fluorescence (TXRF) spectrochemical analysis for silicon wafers 887
Simulation
Computer simulation of argon–nitrogen and argon–oxygen inductively coupled plasmas 369
Simultaneous analysis
Quantitative survey analysis by using the full inductively coupled plasma emission spectra taken from a segmented charge coupled device detector: feasibility study 321
Size distribution
Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols 995
Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry 1009
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Slurry
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Snow samples
Preconcentration of analytes by aerosol deposition in Graphite Furnace Atomic Absorption Spectrometry at the pg ml^{-1} level 113
Sodium
The effect of sodium on analyte ionic line intensities in inductively coupled plasma atomic emission spectrometry: influence of the operating conditions 495
Soft X-ray spectroscopy
Resonant X-ray scattering of boron compounds 593
Soil
Arsenic and antimony determination in soils and sediments by graphite furnace atomic absorption spectrometry with slurry sampling 437
Solid sampling
Size and distribution of particles deposited electrostatically onto the platform of a graphite furnace obtained using laser ablation sampling 1525
Sorption extraction
Direct determination of trace elements in niobium, tantalum and their oxides by inductively coupled plasma atomic emission spectrometry after microwave dissolution 1151
Microwave-assisted sample preparation and preconcentration for ETAAS 1469
Space charge
Ion deposition experiments as a tool for the study of the spatial distribution of analyte ions in the second vacuum stage of an inductively coupled plasma mass spectrometer 231
Spark source mass spectrometry
On the possibility of characterization of thoria by spark source mass spectrometry 471
Spatially resolved atomic absorption
Mechanism of formation and spatial distribution of lead atoms in quartz tube atomizers 643
Speciation
Speciation of chromium using reversed phase-high performance liquid chromatography coupled to different spectrometric detection methods 189
New developments in thermospray sample introduction for atomic spectrometry 1087
Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry 1009
Spectral fitting
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389
Spectral interference
Spectral phenomena in graphite furnace AAS 1341
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351
High-resolution spectra of selected rare earth elements and spectral interferences studied by inductively coupled plasma–atomic emission spectroscopy (ICP–AES) 1567
Spectral profiles
High-resolution spectra of selected rare earth elements and spectral interferences studied by inductively coupled plasma–atomic emission spectroscopy (ICP–AES) 1567
Sputtering
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Effect of discharge parameters on emission yields in a radio-frequency glow-discharge atomic-emission source 567
Sr
The influence of incompletely desolvated droplets and vaporizing particles on chemical matrix effects in inductively coupled plasma spectrometry: time-gated

optical emission and laser-induced fluorescence measurements 353
Sr/Ca ratio
The optimization of the precision of the strontium/calcium ratio measurement in coral samples by radioisotope induced X-ray fluorescence 1645
Standard addition method
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
Stark broadening
Laser-enhanced ionization spectroscopy of mercury Rydberg states 1139
Spectroscopic study of the cathode fall region of Grimm-type glow discharge in helium 745
Statistical classification
Multivariate statistical characterization of the tolerance of argon inductively coupled plasmas to organic solvents 103
Stokes' law
Ultrasonic slurry sampling graphite furnace atomic absorption spectrometry: analytical considerations for analysis of a high density glass material 431
Stomach
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Surface analysis
Study of a pulsed glow discharge ion source for time-of-flight mass spectrometry 633
Depth profiling using total reflection X-ray fluorescence spectrometry alone and in combination with ion beam sputtering 795
Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry 813
A depth profile fitting model for a commercial total reflection X-ray fluorescence spectrometer 823
Development of glancing-incidence and glancing-take-off X-ray fluorescence apparatus for surface and thin-film analyses 841
Total reflection X-ray photoelectron spectroscopy of copper phthalocyanine–gold multilayers 873
Improvement of total reflection X-ray fluorescence (TXRF) spectrochemical analysis for silicon wafers 887
Surface contamination
A depth profile fitting model for a commercial total reflection X-ray fluorescence spectrometer 823
Surface density
Development of glancing-incidence and glancing-take-off X-ray fluorescence apparatus for surface and thin-film analyses 841
Synchrotron radiation
Total reflection X-ray fluorescence analysis of light elements 281
Resonant X-ray scattering of boron compounds 593
Total reflection X-ray fluorescence analysis of light elements with synchrotron radiation and special X-ray tubes 861
Analysis of Ni on Si-wafer surfaces using synchrotron radiation excited total reflection X-ray fluorescence analysis 901

Ta filament atomizers
Investigation of iron determination in HCl gas using the nondispersive atomic fluorescence spectrometer with a tantalum coil atomizer 1551
Tantalum
Direct determination of trace elements in niobium, tantalum and their oxides by inductively coupled plasma atomic emission spectrometry after microwave dissolution 1151
Three-dimensional density profiles of sputtered atoms and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Te
Investigation of the formation of solid phase compounds between tellurium and interfering elements in graphite furnace atomic absorption spectrometry 1247
Theoretical modelling
Adaptation of the filter furnace atomizer for atomic absorption determination of less volatile metals 1377
Theory
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Thermochemistry
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Thermospray nebulization
New developments in thermospray sample introduction for atomic spectrometry 1087
Thin layer
Glancing incidence X-ray analysis: more than just reflectivity 805
Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry 813
Thoria
On the possibility of characterization of thoria by spark source mass spectrometry 471
Three-dimensional profiles
Three-dimensional density profiles of sputtered atoms

and ions in a direct current glow discharge: experimental study and comparison with calculations 205
Three-dimensional density profiles of argon metastable atoms in a direct current glow discharge: experimental study and comparison with calculations 219
Ti
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection wavelengths 675
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Time-of-flight mass spectrometry
Study of a pulsed glow discharge ion source for time-of-flight mass spectrometry 633
Time-gated signals
The influence of incompletely desolvated droplets and vaporizing particles on chemical matrix effects in inductively coupled plasma spectrometry: time-gated optical emission and laser-induced fluorescence measurements 353
Time-resolved ionization
Analytical time-resolved laser enhanced ionization spectroscopy I. Collisional ionization and photoionization of the Hg Rydberg states in a low pressure gas 295
Total reflection X-ray fluorescence (TXRF) spectrometry
Total reflection X-ray fluorescence analysis of light elements 281
Development of glancing-incidence and glancing-take-off X-ray fluorescence apparatus for surface and thin-film analyses 841
Characteristics of total reflection X-ray excited current detected with the tip of a scanning tunneling microscope 855
Analysis of Ni on Si-wafer surfaces using synchrotron radiation excited total reflection X-ray fluorescence analysis 901
An optimized set-up for total reflection particle induced X-ray emission 847
Calibration of reference materials for total-reflection X-ray fluorescence analysis by heavy ion backscattering spectrometry 881
Fundamental quantification procedure for total reflection X-ray fluorescence spectra analysis and elements determination 915
Total reflection X-ray fluorescence analyses of samples from oil refining and chemical industries 953
Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry 961
Application of total-reflection X-ray fluorescence for the determination of lead, calcium and zinc in size-fractionated marine aerosols 995
Multielement determination in sediments, pore water and river water of Upper Austrian rivers by total reflection X-ray fluorescence 1003
Determination of metals and their species in aquatic humic substances by using total-reflection X-ray fluorescence spectrometry 1009
Microanalysis of old violin varnishes by total-reflection X-ray fluorescence 1053
Determination of heavy metals in biofilms from the River Elbe by total-reflection X-ray fluorescence spectrometry 1019
Determination of mercury by total-reflection X-ray fluorescence using amalgamation with gold 1195
Total reflection X-ray fluorescence analysis of light elements with synchrotron radiation and special X-ray tubes 861
Analysis of human tissues by total reflection X-ray fluorescence. Application of chemometrics for diagnostic cancer recognition 1039
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Microanalysis of old violin varnishes by total-reflection X-ray fluorescence 1053
Depth profiling using total reflection X-ray fluorescence spectrometry alone and in combination with ion beam sputtering 795
Variable X-ray excitation for total reflection X-ray fluorescence spectrometry using an Mo/W alloy anode and a tunable double multilayer monochromator 907
Determination of metal-cofactors in enzyme complexes by total-reflection X-ray fluorescence spectrometry 1033
A depth profile fitting model for a commercial total reflection X-ray fluorescence spectrometer 823
Total-reflection X-ray fluorescence spectrometry, a powerful tool for semiquantitative analysis of archaeological glass samples 1057
Calibration of reference materials for total-reflection X-ray fluorescence analysis by heavy ion backscattering spectrometry 881
Direct total-reflection X-ray fluorescence trace element analysis of organic matrix materials with a semi-empirical standard 923
Trace element determination of mercury by total-reflection X-ray fluorescence 945
Examination of clean room aerosol particle composition by total reflection X-ray analysis and electron probe microanalysis 967

Performance and characteristics of two total-reflection X-ray fluorescence and a particle induced X-ray emission setup for aerosol analysis 977
Application of total-reflection X-ray fluorescence spectrometry to the analysis of airborne particulate matter 985
Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry 1027
Improvement of total reflection X-ray fluorescence (TXRF) spectrochemical analysis for silicon wafers 887
Simultaneous determination of germanium, arsenic, tin and antimony with total-reflection X-ray fluorescence spectrometry using the hydride generation technique for matrix separation—first steps in the development of a new application 935
Trace analysis
Trace element determination of mercury by total-reflection X-ray fluorescence 945
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 1. Determination of optimum excitation and detection wavelengths 675
Direct total-reflection X-ray fluorescence trace element analysis of organic matrix materials with a semi-empirical standard 923
Determination of trace element distribution in cancerous and normal human tissues by total reflection X-ray fluorescence analysis 1047
Transition metals
Possibilities and limitations of spectral fitting to reduce polyatomic ion interferences in inductively coupled plasma quadrupole mass spectrometry in the mass range 51–88 389
Transversely heated graphite atomizer (THGA)
Improved performance of transverse heated graphite atomizers by elimination of convective gas flows 1431
Spectral phenomena in graphite furnace AAS 1341
Signal oscillation and overcorrection in the determination of aluminum using the transversely heated graphite furnace with Zeeman background correction 1351
Trapping
Non-spectral interference effects in platform-equipped graphite atomisers 1333
Direct determination of metal traces in process gases by atomic absorption spectrometry using automated analyte trapping 1459
Tryptophan
Trace element determination in drugs by total-reflection X-ray fluorescence spectrometry 961
Tungsten atomizer
Tungsten atomizer—the theory of atomization reactions 1327
Detection of titanium in electrothermal atomizers by laser-induced fluorescence. Part 2. Investigation of various types of atomizers 703
Ultrafine particles
A feasibility study of the use of electrostatic deposition and laser-induced fluorescence in a graphite furnace for size-segregated analysis of lead and gold in ultrafine 0.02–0.2 μm particles 1597
Ultrasonic slurry sampling
Determination of mercury in fish samples by slurry sampling electrothermal vaporization inductively coupled plasma mass spectrometry 779
Ultratrace analysis
Graphite furnace atomic absorption spectrometry and environmental challenges at the ultratrace level—a review 1451
An optimized set-up for total reflection particle induced X-ray emission 847
Underwater elemental analysis
Elemental analysis of metals under water using laser-induced breakdown spectroscopy 25
Uptake
Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry 1027
Urea
Total reflection X-ray fluorescence analyses of samples from oil refining and chemical industries 953
Urine
Determination of cadmium and lead in urine by derivative flame atomic absorption spectrometry using the atom trapping technique 727

Vapor distribution
Forty years of electrothermal atomic absorption spectrometry. Advances and problems in theory 1239
Vaporization mechanism
Vaporization and atomization of the platinum group elements in the graphite furnace investigated by electrothermal vaporization-inductively coupled plasma-mass spectrometry 1575
Variable excitation energies
Variable X-ray excitation for total reflection X-ray fluorescence spectrometry using an Mo/W alloy anode and a tunable double multilayer monochromator 907
Velocity distribution
Diagnostic study of laser ablated $YBa_2Cu_3O_y$ plumes 339
Violin varnish
Microanalysis of old violin varnishes by total-reflection X-ray fluorescence 1053
Voigt profile
An investigation of the 2f-wavelength modulation

technique for detection of atoms under optically thin as well as thick conditions 1663
Spectroscopic applications of the plasma dispersion function. II: An asymmetric lineshape model and the complex susceptibility 1113

Wafer analysis
Analysis of Ni on Si-wafer surfaces using synchrotron radiation excited total reflection X-ray fluorescence analysis 901
Waste water analysis
Speciation of chromium using reversed phase-high performance liquid chromatography coupled to different spectrometric detection methods 189
Water
Removal of water and hydrogen from graphite tubes investigated by electrothermal vaporization inductively coupled plasma mass spectrometry 1545
Direct determination of arsenic in fresh and saline waters by electrothermal vaporization inductively coupled plasma mass spectrometry 75
Wavelength dispersive detection
Grazing-emission X-ray fluorescence spectrometry: principles and applications 829
Wavelength modulation
Diode-laser atomic-absorption spectrometry by the double-beam–double-modulation technique 1125
An investigation of the 2f-wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663
Measurements of rubidium in standard reference samples by wavelength-modulation diode laser absorption spectrometry in a graphite furnace 305
Wavelength stabilization
Improvement of the wavelength tunability of etalon-type laser diodes and mode recognition and stabilization in diode laser spectrometers 1215
Wavelength tuning of laser diode
Improvement of the wavelength tunability of etalon-type laser diodes and mode recognition and stabilization in diode laser spectrometers 1215
Wheat
Study of interaction of iron and lead during their uptake process in wheat roots by total-reflection X-ray fluorescence spectrometry 1027
2f-WM
An investigation of the 2f—wavelength modulation technique for detection of atoms under optically thin as well as thick conditions 1663

X-ray excited current
Characteristics of total reflection X-ray excited current detected with the tip of a scanning tunneling microscope 855
X-ray emission
Characteristics of fast electrons from Grimm glow discharge He plasmas as an electron source 1587
X-ray fluorescence (XRF)
Measurement of Ll/Lα intensity ratios for elements in the region $57 \leq Z \leq 92$ by a Si(Li) detector 201
Total reflection X-ray fluorescence analysis of light elements 281
Glancing incidence X-ray analysis: more than just reflectivity 805
Ion beam sputtering techniques for high-resolution concentration depth profiling with glancing-incidence X-ray fluorescence spectrometry 813
Development of glancing-incidence and glancing-take-off X-ray fluorescence apparatus for surface and thin-film analyses 841
Characteristics of total reflection X-ray excited current detected with the tip of a scanning tunneling microscope 855
Microanalysis of old violin varnishes by total-reflection X-ray fluorescence 1053
Resonant X-ray scattering of boron compounds 593
Analysis of Ni on Si-wafer surfaces using synchrotron radiation excited total reflection X-ray fluorescence analysis 901
X-ray fluorescence cross-sections
Chemical effect on L X-ray fluorescence cross-sections of Hg, Pb and Bi compounds 1167
X-ray photoelectron spectroscopy
Total reflection X-ray photoelectron spectroscopy of copper phthalocyanine–gold multilayers 873
X-ray reflectivity
Glancing incidence X-ray analysis: more than just reflectivity 805
X-ray spectra fitting
Fundamental quantification procedure for total reflection X-ray fluorescence spectra analysis and elements determination 915

Zeeman background correction
A longitudinally heated graphite furnace for a longitudinal magnetic field. Formation of absorbance signals 1395
